

Outdoor Headaches

SATurday April 11, 1970

By HACK MILLER

Deseret News Sports Editor

The problem is people and pollution.

And that problem might force us into a new way of outdoor life.

There is a threat to some of Utah's more popular fishing places; Strawberry Reservoir is one.

The Board of Health says it will tack a "closed" sign on this lake if adequate facilities are not installed to accommodate the opening-day crowd.

The crowd might reach 50,000 — tens of thousands fence-posting the perimeter of the lake. Thousands more in boats!

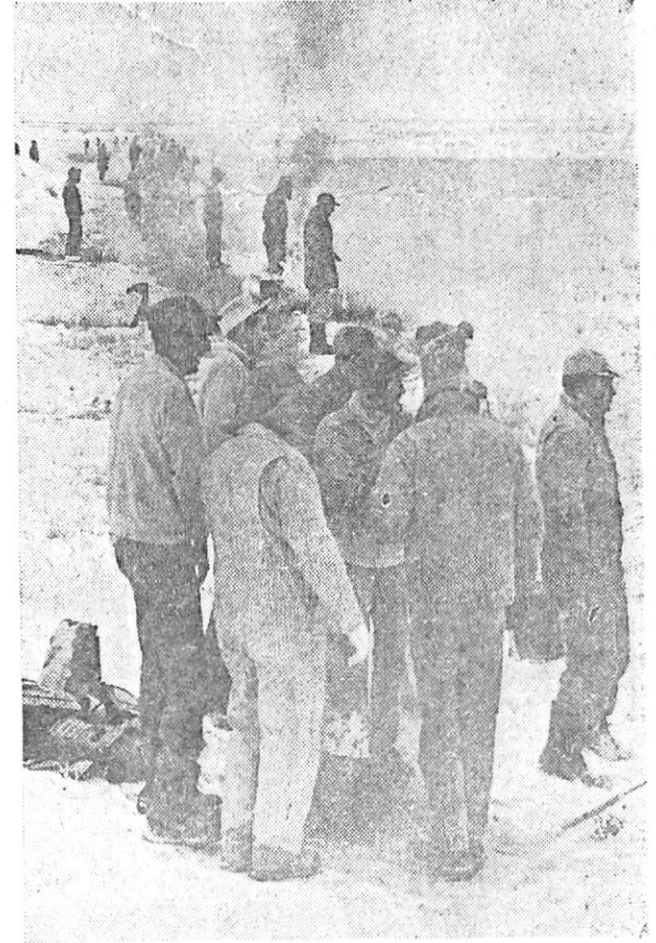

The health experts aren't kidding. And we should hope as much, even though it would break a lot of fishermen's hearts.

This year the toilet facilities must be installed before the June 6 opening. Next year there should be no opening day on any large state water.

Opening days are out of style. Utah kept the opening day to excite people into buying fishing licenses — thereby paying the bills. Merchants like it too. It gave them another Christmas shopping spree.

But highway traffic became acute and pressure started to mount against opening-day crowds. The game and fish people continued to win out.

Then came the Board of Health with a sign and a hammer and said that if conditions are not met which conform to sanitation standards there would not be a worm

Locomotive Springs on opening day shows pressure of a grand opening.

drowned in that lake this year. around — and the springs are 52 miles west of the nearest town of Corrinne.

Take a look at the above picture.

This was an opening day on little Locomotive Springs, far away in the northwest corner of the state.

There wasn't a toilet facility

Sanitation around our fishing places is one of our most serious problems and must be faced. Now that our health experts have decreed if, it is high time to act.

Immunization Clinic Starts February 6th

5 Feb 1970
Immunization clinics under the direction of the Wasatch County Health Department will be held at the County Courthouse, Multipurpose Room from 11:00 a. m. to 2:00 p. m. on the following dates:

Friday, February 6th and 20.

Friday, March 6th and 20th.

Friday, April 3rd and 17th.

Friday, May 1st and 15th.

Please start your immunization at the beginning of the clinics so the series can be completed there. Clinic Rates apply only at the Clinic.

Adults, Pre-School Children, and Kindergarten children are to go to the Courthouse from 11 a. m. to 12:30 p. m.

School Children will be taken there by bus beginning with the Midway School at 12:30 p. m.

School children must bring a sealed envelope the day of the clinic containing the correct change for their shots for that particular day. The envelope should be clearly marked on the outside with the following information:

Name of Child; School; Grade, Teacher; Date; Immunization Desired. The school will not make change for the envelopes. They are to be sealed at home.

The cost of the shots at the clinic will be 50c each. If there is a person who cannot afford the immunization needed, please send a signed note in the sealed envelope and the immunization will be given free of charge.

Only one immunization will be given to a child at one time.

Immunization at the Clinic will be available for the following:

Diphtheria, Tetanus & Pertussis; Tetanus & Diphtheria; Polio; Smallpox, Red Measles, German Measles, Tick, Tetanus, and Typhoid.

Health Depart. to Provide Local Home-Aid Care

Feb. 5, 1970
The Wasatch County Health Department has been authorized by the State Department of Health to provide Home Health Care.

The services to be provided are Skilled Nursing Care, Physical Therapy, and Health-Aide Service. The agency is authorized to care for Medicare patients, private pay patients, patients with private insurance programs, medically needy, and anyone who needs this kind of service.

These services to the home-bound and requests for care may be made by the patient, his family or his physician to the Home Health Agency.

Additional information on the program may be had by calling Mrs. Emily Zenger, County Health Supervisor at the Courthouse.

Strawberry's Facing

'No Fishing'—Unless

By DAVE KADLECK

Deseret News Sports Writer

No fishing at Strawberry Reservoir this year?

That possibility loomed likely with the announcement that "minimum sanitation standards are not being met" by concessionaires on the popular fishing water.

Dr. Larry B. Duke, chairman of Wasatch County Board of Health, issued that warning today.

Dr. Duke told the Deseret News: "If they won't meet minimum standards outlined at a meeting a year ago, we won't issue license for operation."

"There must be a stop to the unsanitary conditions prevailing at the lake on opening day. A year ago 23 facilities were provided to serve the near 20,000 opening day anglers. That isn't enough to be sure," Dr. Duke added.

The State Board of Health

issued minimum standards to be met a year ago. Those standards were directed at raw sewage, removal of garbage, and general sewerage systems now at the lake," he explained.

"Our hope now is to offer fair warning and ample time to make the preparations that must be made by opening date (June 6)," he explained.

"I'm aware that it would be foolish to spend a lot of money on expensive sewage systems in view of future growth of the lake. But current sanitation problems can be solved without a great deal of cost," he concluded.

Dr. Duke was referring to the Soldier Creek Dam scheduled for completion during the '70. It is expected to be administered by the Forest Service.

Present control of the shoreline properties is administered by the Strawberry River Water Users Assn.

Clean Up Strawberry

With Strawberry Reservoir scheduled for substantial enlargement within the next seven years, there is no time like the present to start planning zoning ordinances that will prevent the type of semi-slum areas that now dot that famous fishing water.

It's true that the 300-foot-wide federally-controlled buffer zone around the enlarged reservoir will alleviate part of the problem — shanties next to the shore. But undoubtedly cabins will be built on private land back of that zone, and it is these which need to be upgraded by a new set of building ordinances.

Not only do building standards need to be revised, sanitation standards need to be enforced, also. As it is now, sanitation facilities at the reservoir simply are not adequate to meet the demand. In fact, concessionaires have been warned that if facilities do not meet minimum standards by the June 6 opening date, they will not be allowed to operate this year.

In an extreme case, the reservoir itself could conceivably be closed to fishing.

It is useless, of course, to put in an elaborate sewage system that will be flooded out in a few years. But last year's 23 facilities for 20,000 opening day anglers was ridiculous, too. Not only are more facilities needed, but better designed ones to keep from polluting the water.

Wasatch County not only needs to press its health standards for the immediate future, but it also needs some long-range planning, too.

Save a Child in '70 Rubella Vac. Clinic Set for April 10-11

Final preparations are being made this week for the all-out war against Rubella (German Measles). The SAVE A CHILD IN '70 campaign, which con-

cludes with the mass inoculation of all 1 to 12-year-old children on April 10-11 is aimed at the complete annihilation of this childhood disease. The great benefit will be to an estimated 200 babies, yet to be born, who will then be free from the danger of birth defects caused by Rubella.

WORKING TOGETHER, the State Division of Health, Utah State Medical Association, Utah State Nurses Association, County and City health depart-

ments, and many volunteer organizations have organized special Rubella clinics in every section of the State. Every clinic will be supervised by a practicing physician and attended by registered nurses. A majority of the clinics will be set

up in local schools. The organization is by counties. Given below are the addresses of the clinics in Wasatch County, together with the days and times they will be in operation.

ALL PARENTS OR GUARDIANS of 1 to 12 year old children should arrange to have their children taken to the clinic in their locality to receive the inoculation. This should be done, regardless of the child's past history of having had German Measles. Also, it should be understood that this is a different vaccine from the Red Measles vaccine.

For security reasons, no child will be given the vaccine without the presence or written consent of the parents or guardian. Registration forms will be provided at the clinics. However, to save time, clip the small form shown here, fill it out, sign it and take it with you to the

clinic.

Who Should Have Rubella Vaccine:

All children — boys and girls — 1 through 12 years of age should have the Rubella vaccine. A \$1.00 donation will be asked, but no child will be turned away.

Who Should Not Have Rubella Vaccine:

Any girl who has started menstruating.
Children sick with fever on the day of the vaccine program.
Children allergic to dogs or the antibiotic "neomycin".
Children who have a malignancy or blood disease.
If a child is under a doctor's care at the time of the clinic, consult him beforehand.

Anyone who has had one of the following vaccines within one month: polio, smallpox, red measles or mumps.

School children will be immunized at the schools on Fri-

Rubella Registration Form

To save time, fill this out and bring to Rubella/German Measles Clinic. For children from one through 11 years. No inoculation will be given without consent of parent or guardian.

NAMES OF CHILDREN TO BE IMMUNIZED	AGE

I hereby request that Rubella vaccine be administered to the above child/children.

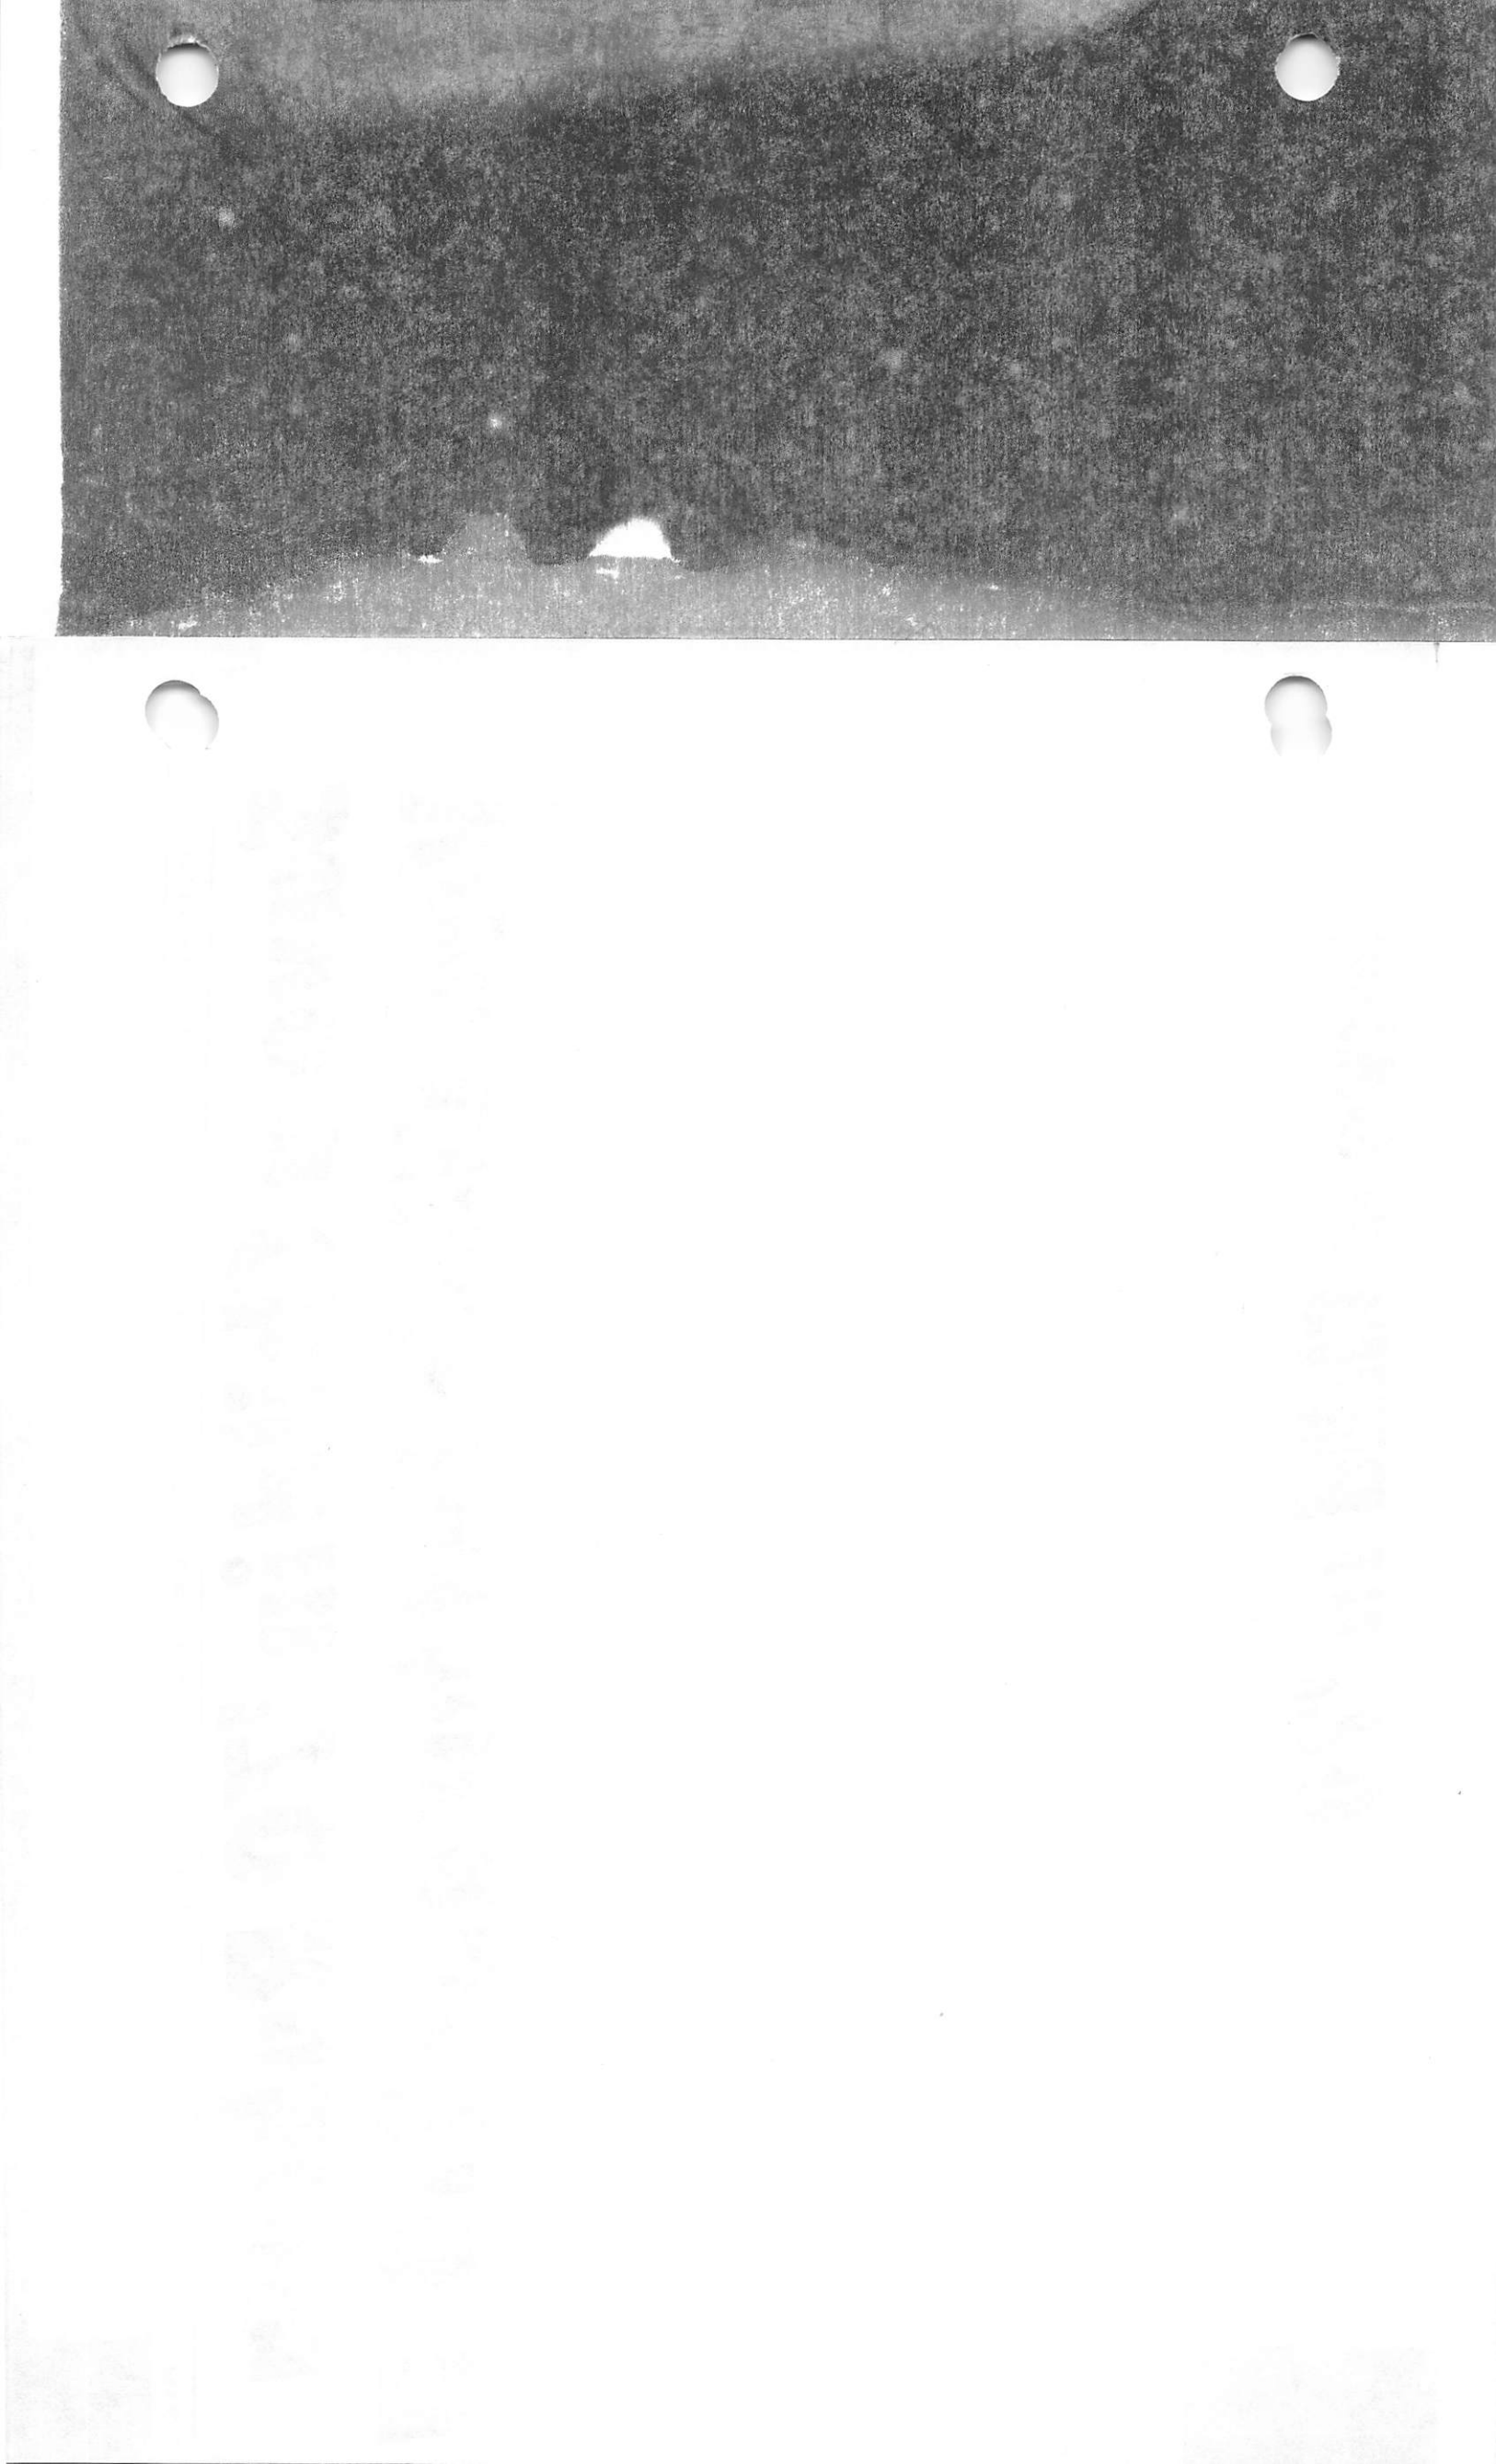

Signed..... Parent or Guardian

Be sure to bring this form with you!

day, April 10th. Each child must bring a sealed envelope containing the correct change A. M. to 1:00 P. M. Pre-School children must be brought to the Court House on Saturday, April 11th from 11:00

Save a Child in '70

Don't forget to have the Rubella vaccine one month: polio, smallpox, red

cludes with the illness associated with the complete annihilation of this childhood disease. The great benefit will be to an estimated 200 babies, yet to be born, who will then be free from the danger of birth defects caused by Rubella.

Save a Child in '70

April 10th and 11th has been designated as "Save a Child in '70" by rubbing out Rubella (German Measles) in Utah.

Rubella is the 3-day or German measles. It's the disease which can be harmful to a baby during a mother's first 3 months of pregnancy. The best way to protect mothers and their babies-to-be is to stop Rubella — once and for all — by vaccinating children who spread the disease to child-bearing-age women.

Who Should Have Rubella Vaccine:

All children — boys and girls — 1 through 12 years of age

should have the Rubella vaccine. A \$1.00 donation will be asked, but no child will be turned away.
